# Delta Textile Vector Control Drive CT2000 Series

[www.deltaww.com](http://www.deltaww.com)

 **DELTA**  
Smarter. Greener. Together.

The CT2000 Series is an industrial drive designed for textile and other critical environment applications that have a high density of dust, fiber, oil or other such substances. To prevent fiber or dust from clogging or entering the drive, the CT2000 offers a fanless design for flange mount installation which is suitable for an application environment that has an air cooling duct system. There is also a large fan design for wall mount installation that can fit all types of applications. The CT2000 provides ultimate application flexibility for the textile industry.

Applications: Spinning machines, roving machines, machine tool, ceramic, glass and other highly demanding industries.

## Features

- Fanless design with high efficiency heat sink to prevent fiber and dust from clogging or entering the drive. No more overheating problems (\*1)
- Flange mount installation to enhance system safety and stability and provide excellent heat dissipation performance (\*1)
- Supports external fan connection (\*1)
- Wall mount installation model with a large fan (\*2)
- Deceleration Energy Backup (DEB) function for smooth motor deceleration control
- Supports both asynchronous and synchronous motors
- Common DCBUS design
- Enhanced drive durability using Printed Circuit Board (PCB) coating standard IEC 60721-3-3 CLASS 3C3
- Built-in 10K steps PLC programming capability and RS-485 with MODBUS communication for master station so there is no need for an additional host controller and communication module in the system. Constructs a simple network with high performance and effective cost.
- Optional communication cards are available upon request

## Deceleration Energy Backup (DEB)

The CT2000 Series features a Decelerate Energy Backup (DEB) function to prevent thread or yarn breaking when a sudden power outage or abnormal operation interruption occurs. It uses the regenerative energy that is produced during braking to facilitate the motor deceleration process. It also supports a common DCBUS connection allowing multiple drives to control multiple motors decelerating to a stop smoothly and synchronously at the same speed ratio which is a perfect solution for spinning machines and other applications that require synchronous deceleration control of motors via DCBUS.
