After DVP01PU-S is disconnected, Do NOT touch any terminals in a minute. Make sure that the ground terminal Ⓞ on DVP01PU-S is correctly grounded in order to prevent electromagnetic interference.

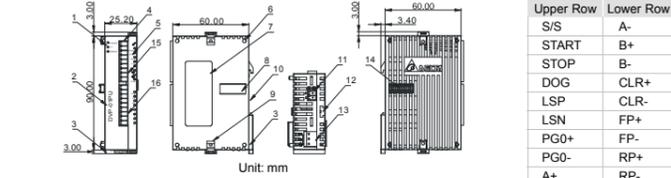

*FR* DVP01PU-S est un module OUVERT. Il doit être installé que dans une enceinte protectrice (boîtier, armoire, etc.) saine, dépourvue de poussière, d'humidité, de vibrations et hors d'atteinte des chocs électriques. La protection doit éviter que les personnes non habilitées à la maintenance puissent accéder à l'appareil (par exemple, une clé ou un outil doivent être nécessaire pour ouvrir a protection).

*FR* Ne pas appliquer la tension secteur sur les bornes d'entrées/Sorties, ou l'appareil DVP01PU-S pourra être endommagé. Merci de vérifier encore une fois le câblage avant la mise sous tension du DVP01PU-S. Lors de la déconnection de l'appareil, ne pas toucher les connecteurs dans la minute suivante. Vérifier que la terre est bien reliée au connecteur de terre Ⓞ afin d'éviter toute interférence électromagnétique.

## Introduction

**Model Explanation & Peripherals**  
DVP01PU-S (positioning unit) is mainly applied to the speed/position control of step/servo driven system. The maximum output pulse can be up to 200 kPPS, and built-in various rotor control modes. The DVP-PLC SS/SA/SC/SX/SV series can read/write DVP01PU-S via FROM/TO instructions. There are 49 CRs (Control Register) with 16-bit for each register in DVP01PU-S. The 32-bits data is composed of 2 continuous CR number.
