## High-Speed Communication Solution for Multi-Axis and Synchronous Motion Control

The Delta Industrial PC-Based Motion Control Solution features a one-wire protocol for unimpeded access, achieving easy wiring, high synchronization, and excellent motion control performance. With Delta's flexible dynamic-link library (DLL), it easily connects Delta's motion control cards to multiple control devices such as servo motors, linear motors, remote digital I/O modules, analog modules, and pulse I/O modules for real-time data exchanges and high-precision technical programming via the PCI / PCIe interface.

The solution is the best integrated motion control platform that effortlessly fulfills the need for multi-axis and synchronous motion control with enhanced stability, flexible extension capabilities and versatile operation for industry upgrades.

### Four Major Features

- ▶ Supports DMCNET and EtherCAT communication motion control cards
- ▶ Connects to a variety of peripheral devices with standard Ethernet structure, such as servo motors, remote digital I/O and analog modules and stepping motors. Directly drives DD motors and linear motors.
- ▶ Offers a high-security IC device for each motion control card for confidential programming protection
- ▶ Fieldbus verification and validation software provides easy configuration with relevant parameters of the fieldbus communication segment and hardware system, reducing programming cost and third-party software

# Delta's High-Speed Motion Control System - DMCNET Product Features

Delta's Motion Control NETwork (DMCNET) is a high speed, real-time communication system, capable of controlling up to 12 axes of servo system units within 1ms simultaneously: with 3-axis helical and linear interpolation in 4 groups, or 2-axis linear and arc interpolation in 6 groups. It supports 64-bit dual precision floating point, allowing high-precision system calculations and flexible operation, and also absolute commands, incremental commands and T-curve / S-curve velocity profiles for different uses. With built-in position, speed and torque control modes, and 35 homing modes, it is able to receive real-time servo information, parameters, or change control modes via communication command, offering fast communication and motion control for various applications.

## DMCNET Motion Control Structure

DMCNET is equipped with the high-speed and reliable one-wire DMCNET communication protocol for diverse motion control applications. Adapted depending on customer's needs, Delta's PCI motion control cards are available in three series: the 12-axis PCI-DMC-A02, 6-axis PCI-DMC-F02 with digital I/O interfaces and the PCI-DMC-B01 with pulse compare & capture functions. All series are able to connect to multiple servo systems, such as the high performance ASDA-A2-F Series, standard ASDA-B2-F Series, or ASDA-A2R Series. Combined with Delta's linear motors, the series establishes a total motion control solution enabling lower system cost and superior performance to increase end-product value and competitiveness.

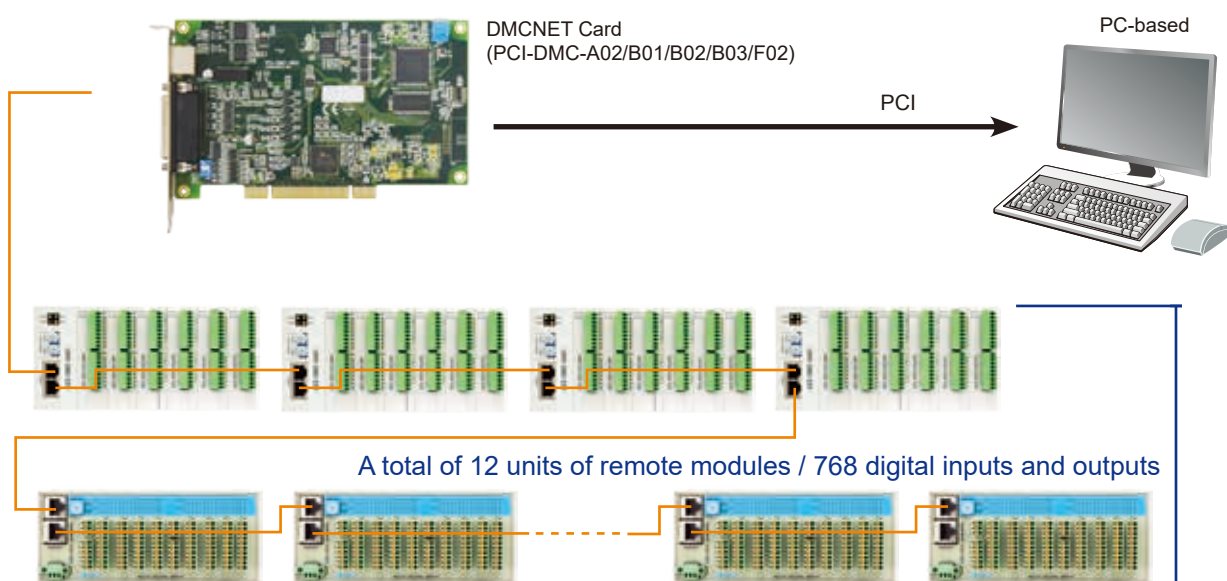

## DMCNET Communication

The DMCNET is a motion control communication network that is able to control up to 12 servo drives or modules in serial connection on the same fieldbus, simplifying wiring as well as saving cost. With its fast and stable communication speed that deals with commands of the servo motors and modules within 1ms simultaneously, DMCNET offers an easy, fast and stable communication system solution that makes motion control easier.

## DMCNET I/O Control Structure

In a pure I/O control structure, DMCNET is capable of controlling up to 12 remote module units, which include a total of 768 digital inputs and outputs, offering customers a more flexible and effective solution.

# Motion Control Functions

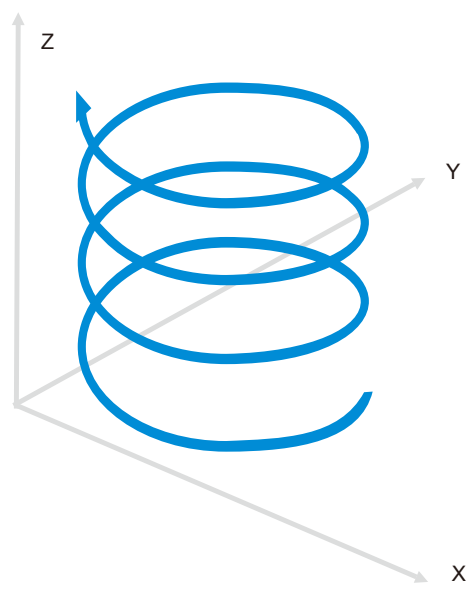

## Multi-Group Synchronous Control

The DMCNET is capable of controlling 12 servo system units or 4 groups, 3-axis interpolation algorithms synchronously, realizing simultaneous 3-axis linear interpolation, 2-axis arc interpolation, 3-axis helical interpolation and continuous interpolation. It can also transfer the data of 12 servo motor units, or 768 digital inputs and outputs within 1ms simultaneously.

# Standard / Economical Motion Control Card PCI-DMC-A02 / PCI-DMC-F02

## Rapid Configuration and Easy Control with Digital I/O Interfaces

The PCI-DMC-A02 and PCI-DMC-F02 motion control cards are built-in with digital local I/O interfaces that are equipped with up to 32 digital inputs and 24 digital outputs. Without controlling through communication, the motion cards are able to rapidly capture and identify IO messages, enhancing the controlling efficiency of the system. For users who have fewer IO needs, this helps save cost with extended axes and rapid response (the PCI-DMC-F02 motion control card controls up to 6 axes). In addition, the motion cards can connect to a manual pulse generator (MPG) and conduct system adjustment directly, achieving real-time configuration and flexible operation.

# Advanced Motion Control Card PCI-DMC-B01

## Real-time Capture and Compare Functions

The capture function inputs a retrieve pulse to the control cards via an encoder and performs a pulse compare to remotely trigger the camera shutter and take pictures in equally spaced or unequally spaced pulse positions at a set time interval.

The PCI-DMC-B01 motion card provides 2 groups of real time pulse capture and 2 groups of compare functions.

# Advanced Motion Control Card PCI-DMC-B02

## Real-time Capture and 2D Compare Functions

- The X and Y-axis path planning function can set the position and inputs the retrieve pulses of X and Y-axis to the control cards via an encoder. Users set 2D compare condition and speed to remotely trigger the camera shutter and take pictures.
- The PCI-DMC-B02 motion card provides 3 groups of real time pulse capture and 10 groups of compare functions.

# Advanced Motion Control Card PCI-DMC-B03

## Real-time Capture and Multiple Compare Functions

- The capture function inputs a retrieve pulse to the control cards via an encoder and performs a pulse compare to remotely trigger the camera shutter and take pictures in equally spaced or unequally spaced pulse positions at a set time interval.
- The PCI-DMC-B03 motion card provides 3 groups of real time pulse capture, 4 groups of equally spaced compare pulse triggers, and 6 groups of unequally spaced compare pulse triggers.

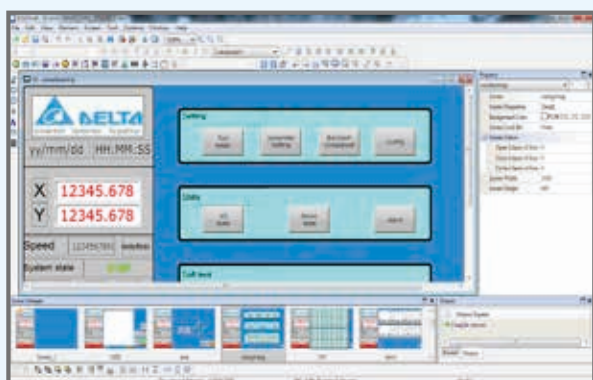

# IPC Motion Platform (IMP 1.5)

## A Simple and Fast Setup Development Platform for Unsurpassed Motion Control

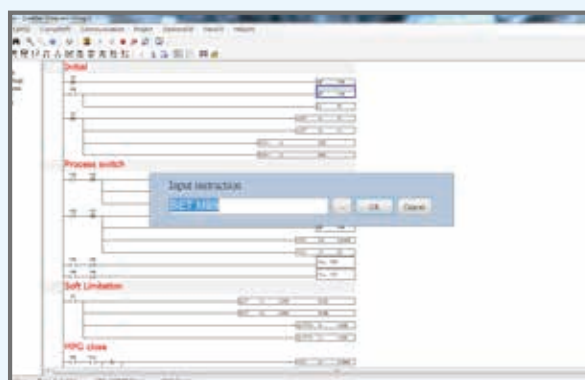

The IMP is a high-speed, flexible and scalable development platform which combines powerful motion control functions and integrates Delta's HMI editing and PLC logic programming software tools to achieve complex and precise motion control based on customers' requirements.

- **Powerful Motion Control Core:** Upgrades Delta's PAC and PC with a motion control card installed to become an advanced motion controller, which integrates functions of motion control, HMI, PLC and high-speed communication fieldbus in one unit.
- **Customized Platform for Secondary Development:** Combines with Delta's standard HMI editor DOPSoft and PLC editor WPLSoft in one customer-driven platform, the platform makes complex programming and development easy and time-saving without depending on technical support from the manufacturer.
- **Scalable Communication for Expandable Network:** Through PCI extension slots, three DMCNET communication networks with up to 36 stations can be established, which means 36 axes of servo motors can be controlled simultaneously without connecting to any remote modules.
- **Industry-Oriented Controller:** Soft Numeric Control (SNC) and Motion Program Macro (MPM) are provided for users to adjust and modify self-developed motion paths and commands according to changing application requirements.
- **Standard Communication Interfaces:** Support built-in standard MODBUS and MODBUS TCP gateways to enable more convenient data transmission and exchange between machines.

**HMI Editor**

After installing on a PC, even without C or C++ programming language, the HMI Editor DOPSoft 3.0 provides a simple path and quick downloading of customized user interfaces to Delta's PAC with the IMP for easy programming and system design. For specific industry applications, such as numerical control (NC), the IMP contains numerous example programs to provide a practical aid in real time for machine verification and evaluation.

**PLC Editor**

The IMP integrates Delta's PLC editor WPLSoft that offers users a ladder diagram editing environment to develop PLC programs for secondary development and to customize their applications. The PLC editor also accepts motion control commands and allows users to control servo systems and remote I/O modules to complete single-axis motions, multi-axis linear interpolation, arc interpolation, continuous speed and other motions, fulfilling the needs of users who are familiar with the PLC.

## IMP - Powerful Motion Control Kernel

VGA Display

The IMP is the kernel of the system, like the firmware of a motion controller, which runs on one of the processors of a multi-core PC or PAC with a plug-in motion control card. Without adding extra hardware, users can download HMI screens and PLC programs, edit user-defined graphical interfaces and execute programming logic control to run machine applications via software and VGA display only.

The IMP is a powerful motion control kernel and it simplifies connectivity and delivers more flexible functionality for the entire system. Not only is MODBUS communication equipped as standard, Soft Numeric Control (SNC) and Motion Program Macro (MPM) are also provided for users to change and calibrate motion paths and commands for different application requirements.

## Soft Numeric Control (SNC) Library

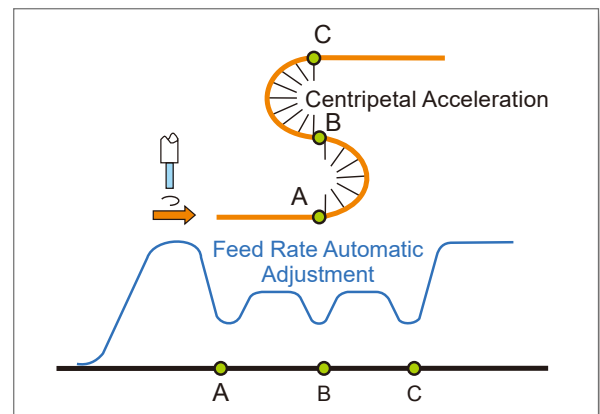

- The SNC Library offers abundant DLLs, including built-in G code decoder, Jerk control, S-curve smoothing, automatic corner deceleration, high speed multi-block look-ahead, curve fitting, tool management and other functions. It helps users develop user-defined NC programs through platforms such as BCB, C#, Delphi, VB, VB.Net, and VC.

### G code Decoder

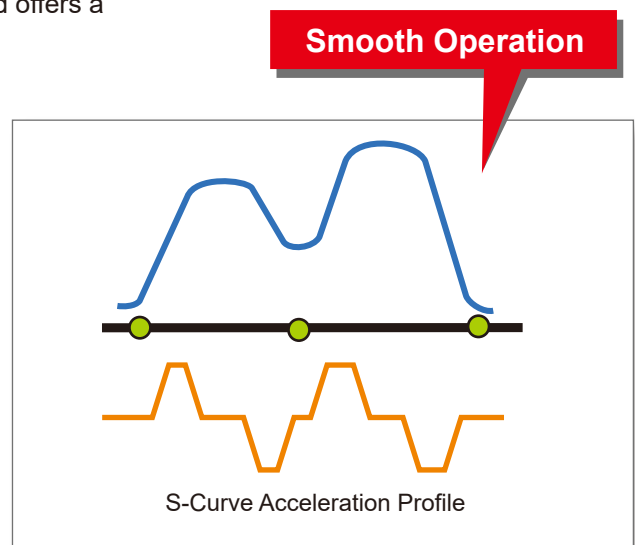

### Jerk Control

- When acceleration changes significantly, or the cutting path changes from a straight line to curve, the Jerk Control decelerates speed to suppress machine vibration and shock, and to maintain stability and precision for long term operation.

### S-Curve Smoothing

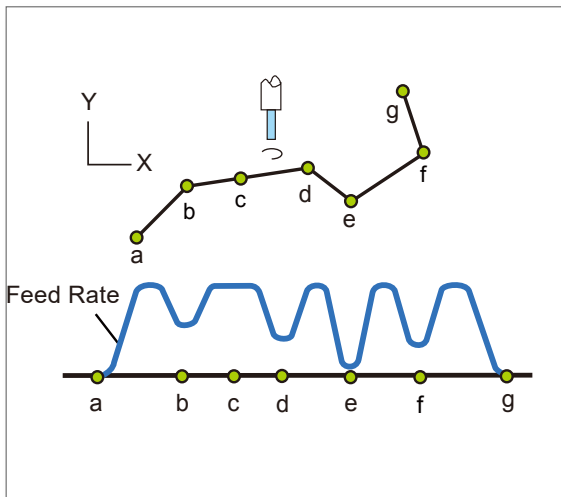

- The S-curve acceleration profile for smooth acceleration and deceleration before interpolation minimizes vibration and offers a stable and high-precision machining process.

# Soft Numeric Control (SNC)

## Automatic Corner Deceleration

- During machining processes, corner deceleration is automatically calculated to help each axis maintain its precision and speed at corners and effectively smooth the process.

## Friction Compensation

- The servo drives provide real-time and smooth friction compensation with high sampling speed control loop for correcting the torque.

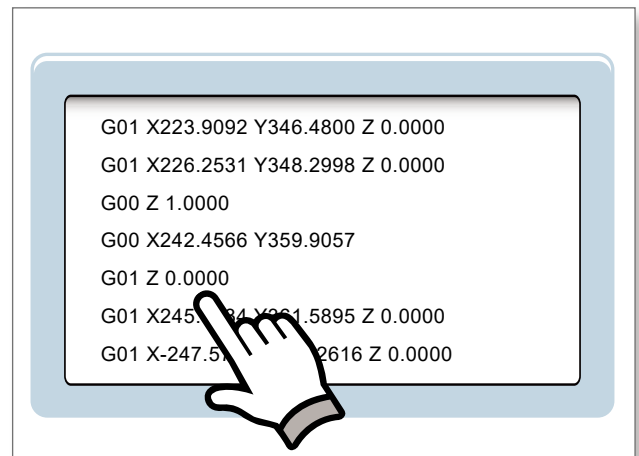

## Look-Ahead

- The look-ahead function performs processing operations according to the preset feed rate and path. This can efficiently reduce unnecessary deceleration and effectively increase production speed.

## Specific Line Number Execution

- When the machining is stopped by an incident, users can restart their program at a specified G code line number with breakpoint line number information to enhance processing efficiency.

## Back and Release

- If there is a sudden stop due to incomplete workpieces cuts or insufficient oxy-fuel gas during laser and flame cutting, this function helps the tool move back to the intermediate point of the original processing path and continue processing.

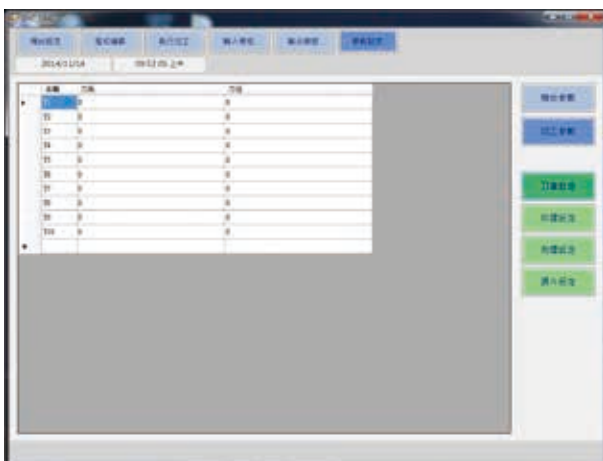

## Manual Pulse Generator (MPG) Simulation

- For first time CNC machining, the MPG simulation function can perform an exact simulation of the desired machining process under all operating conditions. It guarantees processing stability and eliminates problems with execution error or cutter / tool crashing while making processing safer and more accurate.

## Tool Management Function

- The tool management function provides functions such as setting tool numbers, resetting tool indexes, locking the desired tools, and setting numbers of the required cutters to prevent repeated usage and selecting the incorrect tool. The built-in carousel and armless modules also help speed up tool function setup.

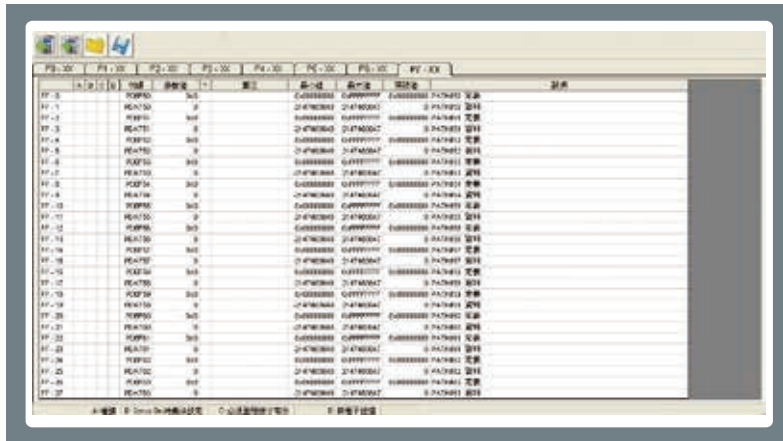

## Motion Graphical Functions

- The motion graphical functions capture the motion of a robot for optimizing motion control.

# Fieldbus Verification and Validation - EzDMC Software

EzDMC Software provides simple editing functions for all the relevant parameters of the fieldbus communication and facilitates easy configuration of program development and the hardware system. Even first time users of Delta's DMCNET motion control cards can utilize the motion control card functions.

## ► User-Friendly Operator Interface

Helps users create and edit programs with clear images, easy-to-use parameter settings, and instruction disk for programming samples and function keys explanation

## ► Independent Control Unit

With the independent control unit, users can set up simple motions of the servo drives for flexible operation and management

### ► Multi-Axis Motion Control Modes

Offers a variety of sample programs and control modes (e.g. Linear 2, Linear 3, Heli, Circle, Circle 2 and Circle 3) for linear, arc and helical interpolation to supervise various multi-axis motions and execute programming for multi-axis motion control applications

### ► Real-time Response and Feedback

Monitoring and displaying the status of the connected servo drives is completed in a timely and efficient manner

# High-Speed Motion Control System - EtherCAT Product Features

Ethernet Central Automation Technology (EtherCAT) is an open Ethernet-based fieldbus system that provides high-efficiency and high-performance synchronization quality for automation control. With EtherCAT, Delta's EtherCAT motion control card PCI-L221-P1 achieves rapid and real-time multiple axes of motion control, and is capable of controlling up to 100 slave stations that enable a 64-axis motion control within 1ms cycle time. It also provides 35 homing modes, point-to-point position control, 2-axis interpolation, 3-axis interpolation, multi-axis synchronization, continuous motion, gantry control, speed control, torque control and more. In addition, the IEC61131 is one of the optional functions for programming flexibility and scalability.

## EtherCAT Motion Control Structure

Delta provides a high-speed motion control card PCI-L221-XXD0 with complete functions for EtherCAT masters. Supporting device descriptions in XML format (EtherCAT Slave Information - ESI), the PCI-L221-XXD0 also allows the system to quickly identify ESI files and offers the capability of real-time connection via EtherCAT for high level integration. It can adjust the communication cycle time between stations within 1ms ~ 0.5 ms according to customer needs.

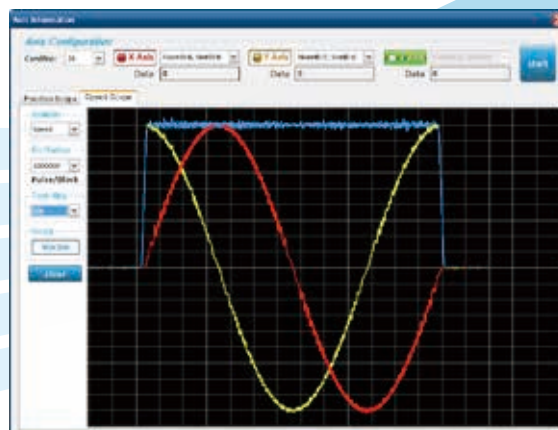

# Fieldbus Verification and Validation - EcNavi Software

EcNavi development software is for configuring an EtherCAT network that includes an EtherCAT master controller and slave devices for data communication, functional identification, programming and debugging. For new users of Delta's EtherCAT motion control, the EcNavi helps them become familiar with the configuration of the system and to complete the function verification and validation in real time.

## ► Hardware Structure Search

Provides a search function for all slaves connected by EtherCAT to check hardware configuration and verify whether network communication is established successfully via software

## ► Speed Curve Tracing

Offers real-time tracing for speed curves of current motion commands to achieve better synchronization effects between multiple axes

### ► Independent Control Unit

Helps users avoid writing complex programs and immediately verifies all motion commands with the servo drives to meet application requirements

### ► Multi-Axis Motion Control Mode

Offers a variety of sample programs and control modes for EtherCAT devices (e.g. Linear 2, Linear 3, Heli, Circle, Circle 2 and Circle 3) to help users easily edit and complete development programs for multi-axis motion control applications

## Specifications

Model Name	PCI-DMC-A02
Supporting Module	Delta Servo Drive ASDA-A2-F / ASDA-B2-F Series
Homing Mode	35 types (Parameter Setting via DMCNET)
Velocity Profiles	T-curve, S-curve
Interpolation Mode	Linear, Arc, Helical and Continuous
Ring	1 Ring
Supporting Languages	VB, VC, BCB, Delphi, C#, VB.NET, Labview
Communication Cable	Category 5e STP Ethernet Cable (24AWG / 4Pairs)
Communication Distance	Max. 30m (12 slave modules)
Communication Interface	Half duplex RS-485 with transformer isolation
PCI Specifications	ver.2.2, supports 32-bit, 3.3 V / 5 V <sub>DC</sub> operation
Power Consumption	+5V DC at 1A typical
Environment	Operating Temperature: 0°C ~ 50°C ; Storage Temperature: -20°C ~ 70°C Humidity: 5 ~ 95% (non-condensing)
Maximum Axes	12
Maximum Number of Modules	12
Digital Input	32-CH isolated, SINK/SOURCE type, 24 V <sub>DC</sub> (5mA/CH)
Digital Output	24-CH isolated, SINK type, 24 V <sub>DC</sub> (100mA/CH)
Noise Tolerance	Withstand (Peak) voltage: 1500V <sub>AC</sub> (Primary-secondary); 1500V <sub>AC</sub> (Primary-PE) ESD (IEC 61131-2, IEC 61000-4-2): 8 KV Air Discharge EFT (IEC 61131-2, IEC 61000-4-4): Power Line: 2KV, Communication I/O: 1KV RS (IEC 61131-2, IEC 61000-4-3): 26MHz ~ 1GHz, 10V/m

## Specifications

Model Name	PCI-DMC-B01
Supporting Module	Delta Servo Drive ASDA-A3-F / ASDA-A2-F / ASDA-B2-F Series
Homing Mode	35 types (Parameter Setting via DMCNET)
Velocity Profiles	T-curve, S-curve
Interpolation Mode	Linear, Arc, Helical and Continuous
Ring	1 Ring
Supporting Languages	VB, VC, BCB, Delphi, C#, VB.NET, Labview
Communication Cable	Category 5e STP Ethernet Cable (24AWG/4Pairs)
Communication Distance	Max. 30 m (12 slave modules)
Communication Interface	Half duplex RS-485 with transformer isolation
PCI Specifications	ver.2.2, supports 32-bit, 3.3 V / 5 V <sub>DC</sub> operation
Power Consumption	+5 V <sub>DC</sub> at 0.5 A typical
Environment	Operating Temperature: 0°C ~ 50°C; Storage Temperature: -20°C ~ 70°C Humidity: 5 ~ 95% (Non-condensing)
Maximum Axes	12
Maximum Number of Modules	12
Digital Input	1-CH isolated, SINK/SOURCE type, 24VDC (5mA/CH)
Digital Output	1-CH isolated, SINK type, 24V <sub>DC</sub> (100mA/CH)
Encoder Input	2-CH isolated, EA± / EB±
Compare Signal Output	2-CH single-ended high speed compare, CMP, Max: 200K 2-CH differential table compare, CMP±, Max: 3.6K
Noise Tolerance	Withstand (Peak) Voltage: 1500V <sub>AC</sub> (Primary-secondary); 1500V <sub>AC</sub> (Primary-PE) ESD (IEC 61131-2, IEC 61000-4-2): 8KV Air Discharge EFT (IEC 61131-2, IEC 61000-4-4): Power Line: 2KV, Communication I/O: 1KV RS (IEC 61131-2, IEC 61000-4-3): 26MHz ~ 1GHz, 10V/m

# 4-axis Pulse Motion Control Card

- **PCI-M324-F1D0**

## Specifications

Model Name	PCI-M324-F1D0
Pulse Output Type	OUT/DIR, CW/CCW, AB phase
Pulse Output Speed	Max. 3.2Mpps
Range	32-bit ( $\pm 2,147,483,648$ pulses)
Homing Mode	35 types
Velocity Profile	T-curve, S-curve
Interpolation	Linear, circular, helix and continuous
Response Signal Counter	32-bit up/down x 4
Latch Output	LTC x 4
Compare Output	CMP x 2
Incremental Encoder Input	$\pm EA$ x 4, $\pm EB$ x 4
Encoder Index Signal Input	$\pm EZ$ x 4
Signal Input Connector	PEL x 4, MEL x 4, ORG x 4, SLD x 4
Servo Drive Input Connector	ALM x 4, SVON x 4, ALMC x 4, INP x 4, RDY x 4, ERC x 4
General Input Terminals	IN x 4
General Output Terminals	OUT x 4
Emergency Stop Input Terminals	EMG x 1
I/O PIN type	Optically isolated with 2.5KVrms on all pins
PCI Slot	PCI Spec. 2.2; supports 32-bit, 3.3/5V <sub>DC</sub> operation
Power Consumption	+5V <sub>DC</sub> at 0.5A typical
Operation Temperature	0°C ~ 50°C

## • ASD-DMC-RM04PI (4-Channel Pulse)

- 4 channels of 200 kHz pulse outputs (Pulse + Direction, CCW pulse + CW pulse, A phase + B phase)
- 4 channels of 200 kHz pulse inputs (CCW pulse + CW pulse, A phase + B phase)
- Digital Inputs x 8 / Digital Outputs x 8
- Built-in positive / negative limit and home for each channel
- In Mode 1, each RM04PI module occupies one node number only, and interpolation motion is carried out within one module.
  - 4 channels occupy 1 node number only
  - 4 channels occupy one PDO and SDO
  - Performs interpolation motion of 4 channels within one RM04PI module only
  - Transfers data in cyclical patterns
  - Motion commands set by parameters
  - Point-to-Point motion mode, motion position calculation is performed within one RM04PI module
- In Mode 2, each RM04PI module occupies node numbers 1~4, which correspond to 4 channels. The interpolation motion can be carried out among different modules.

## Installation & Wiring

# Gateway Type Remote Power Coupler

## Master Module - GA Series • ASD-DMC-GA01

- One GA01 can connect up to a maximum of 4 GE remote modules, of which there may be a maximum of four GE01PH modules.
- 64-point input / 64-point output can be set in one station (extra station for over 64).
- The EzDMC provides a software auto calculation function for calculating the numbers of start and end stations of ASD-DMC-GA01.

### Switching Settings

# Connector CN6 for DMCNET Communication (ASD-A3-F / ASD-A2-F / ASD-A2R-F / ASD-B2-F / ASD-M)

The CN6 communication connector adopts RJ45 joint and isolated cables for connecting Delta's motion control card directly to perform position, speed and torque control on the servo drives and monitor their status.

- Station numbers of DMCNET communication: same as RS-232 and RS-485; set by parameter P3-00 with transmission speed up to 20Mbps
- Provides two communication ports for transmission and receiving, convenient for direct connection of more than one servo drive in serial (connecting 120Ω termination resistor to the last servo drive needed)

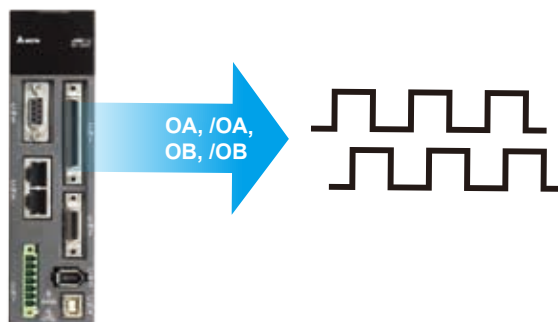

PIN No.	Signal Name	Description
1, 9	DMCNET_1A	DMCNET Channel 1 bus line (+)
2, 10	DMCNET_1B	DMCNET Channel 1 bus line (-)
3, 11	DMCNET_2A	DMCNET Channel 2 bus line (+)
4, 12	-	Reserved
5, 13	-	Reserved
6, 14	DMCNET_2B	DMCNET Channel 2 bus line (-)
7, 15	-	Reserved
8, 16	-	Reserved

※ Connecting method of termination resistor: Two 120Ω termination resistors are required. One is connected between DMCNET\_1A and DMCNET\_1B and the other is connected between DMCNET\_2A and DMCNET\_2B

PCI-L221-B1D0	EtherCAT Advanced Type Motion Control Card with 2 Groups of Pulse Compare
PCI-M324-F1D0	4-axis Pulse Motion Control Card
PCI-D122-XND0	32IN/32OUT Digital Signal Capture Card
DB-D1XX-01D0	Digital Signal Capture Slave Card
DMCNET Remote Modules	
ASD-DMC-RM32MN	32 Digital Input Remote Module (NPN / PNP)
ASD-DMC-RM64MN	64 Digital Input Remote Module (NPN / PNP) plus MPG Module
ASD-DMC-RM32NT	32 Digital Output Remote Module
ASD-DMC-RM64NT	64 Digital Output Remote Module
ASD-DMC-RM32PT	32 Digital I/O Remote Module with 16 DI (NPN / PNP) & 16 DO (Transistor Output)
ASD-DMC-RM04PI	4-Channel Pulse Remote Module (4 Channels of 200 kHz Pulse Outputs and Inputs)
ASD-DMC-RM04AD	4-Channel Analog Input Module
ASD-DMC-RM04DA	4-Channel Analog Output Module
HMC-RIO3232RT5	Digital I/O Remote Module with 32 DI (NPN / PNP), 16 DO (Relay Output) & 16 DO (Transistor Output)
DMCNET Gateway Type Remote Modules	
ASD-DMC-GA01	DMCNET Gateway Type Remote Power Coupler
ASD-DMC-GE01PH	DMCNET Gateway Type Pulse Output Remote Module (1-Channel of 4M High-speed Pulse Interface)
EtherCAT Remote Modules	
R1-EC5500D0	E-BUS Remote Power Coupler
R1-EC5512D0	E-BUS Remote Power Coupler (without communication network interface)
R1-EC5621D0	1-Channel Pulse Output Remote Module
R1-EC5614D0	MPG Extension Module
R1-EC6002D0	16-channel Digital Input Remote Module (NPN / PNP)
R1-EC6022D0	16-Channel Input Remote Module (NPN / PNP); response time 2ms
R1-EC7062D0	16-Channel Digital Output Remote Module (NPN)
R1-EC70A2D0	16-Channel Digital Output Remote Module (PNP)

### EtherCAT Remote Modules

R1-EC70E2D0	16-Channel Digital Output Remote Module (NPN)
R1-EC70F2D0	16-Channel Digital Output Remote Module (PNP)
R1-EC8124D0	4-Channel Analog Input Remote Module
R1-EC9144D0	4-Channel Analog Output Remote Module
R1-EC5614D0	MPG Module
